

blame

derek beaulieu

A fault which terminates before it reaches the surface. Many still-unknown blind faults may exist in southern California. *conjugate faults*: Conjugate faults will sometimes slip. *creep*: Relatively slow, quiet movement along a fault. *fault*: A fracture or zone of fractures along which there has been displacement. *fault line*: A commonly used term that is synonymous with the surface trace of a fault. It should never be used to describe the fault itself; faults are planar, not linear, features. *horizontal fault*: Still theoretical. A measure of the strain energy. *normal fault*. *seismic creep*. See *creep*.
